Bean Hub

Explore Now

Introduction

BeanHub is an integrated platform designed to improve coffee bean management for both customers and staff.
It combines clear browsing and purchasing features with efficient tools for inventory and order handling.
With a focus on accessibility, clarity, and real time updates, BeanHub delivers a smooth and reliable user experience.

Need of Study & Background

Customers often struggle to find clear information about coffee bean availability, quality, origin, and pricing. Traditional purchasing methods cause confusion and do not provide proper order tracking. Employees also face difficulties managing inventory, tracking expiration dates, and identifying best selling products due to manual systems.

Additionally, many current applications lack accessibility features for users who are blind, visually impaired, deaf, or color blind.

Therefore, there is a strong need for an inclusive and efficient platform like BeanHub to simplify purchasing, improve inventory accuracy, and ensure easy access for all users

System design & objectives

01

Better Customer Experience

Provides transparent details about coffee bean types, origins, quality, and prices, and order update.

02

Accessibility Support

Supports Blind Mode, Deaf Mode, and Color blind Mode to ensure inclusive use.

03

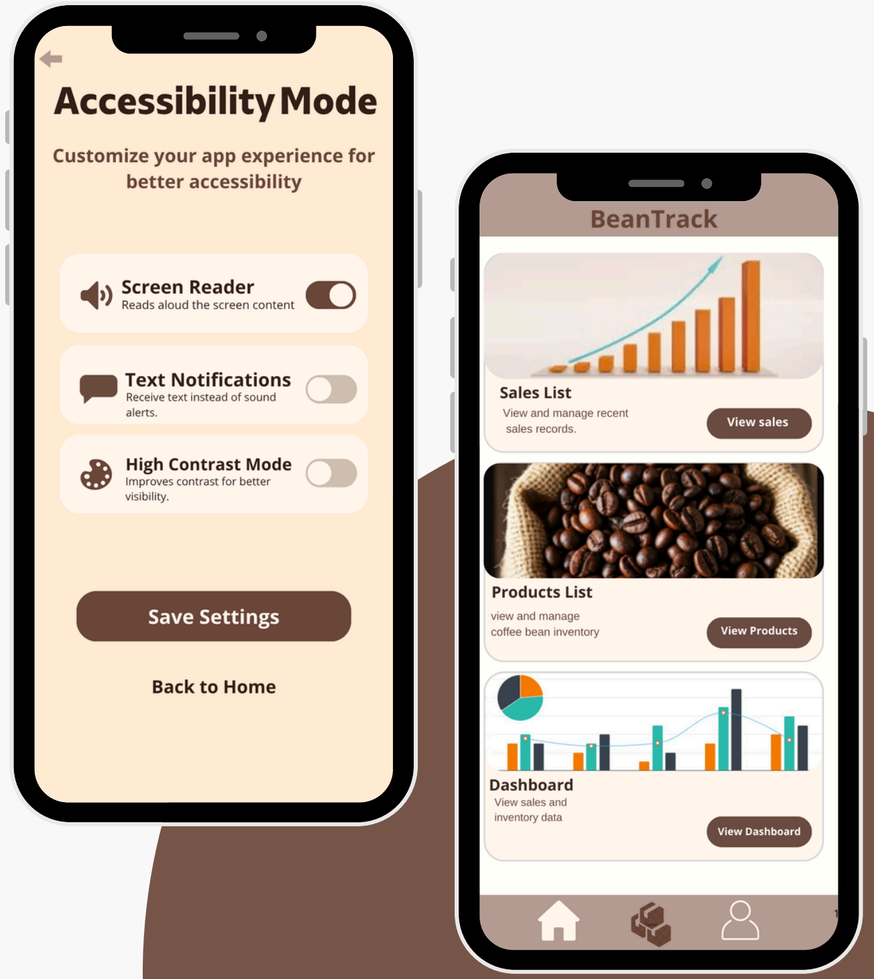

Enhance Staff productivity

Provide tools for staff to easily manage coffee bean records and product list while tracking key details like purchase date, expiry date, cost, price, and quantity.

04

Improve Inventory Control & Insights

Deliver analytics on demand and sales trends, profit tracking, and waste levels, supported by alerts for low stock and near expiry items to help reduce product losses.

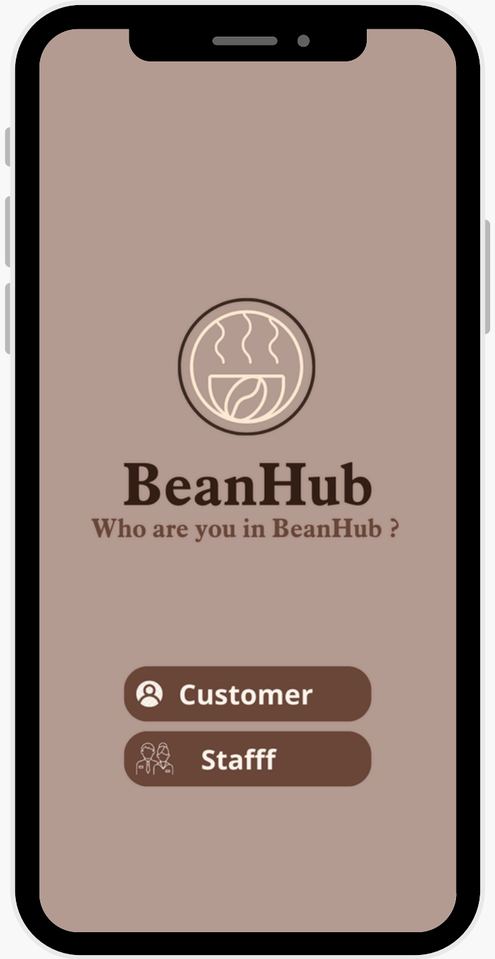

User Categories

Customer Tasks

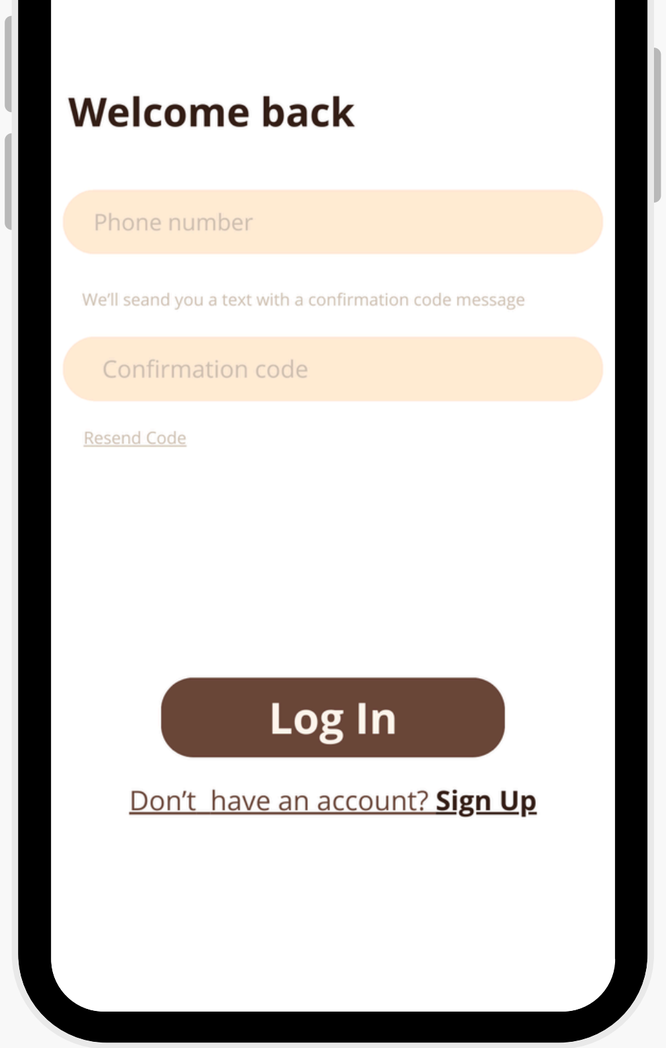

- Browse and view coffee bean details (type, origin, price).
- Add items to the cart and place orders.
- Track order status in real time.

Staff Tasks

- View product list (name, price, cost, quantity)
- View sales list (name, sold quantity, price)
- View dashboard and alert

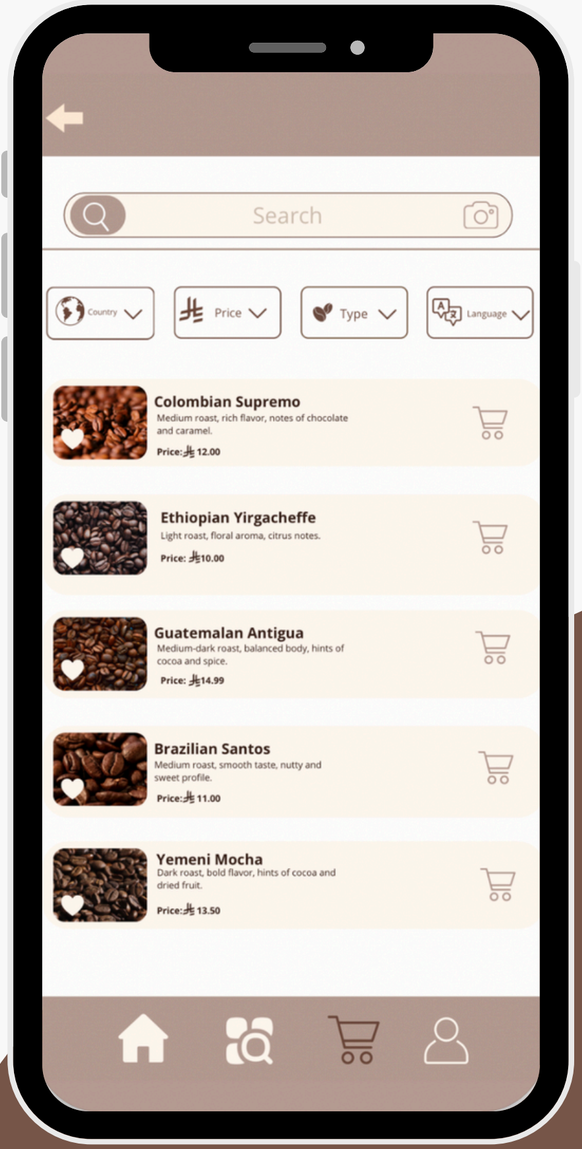

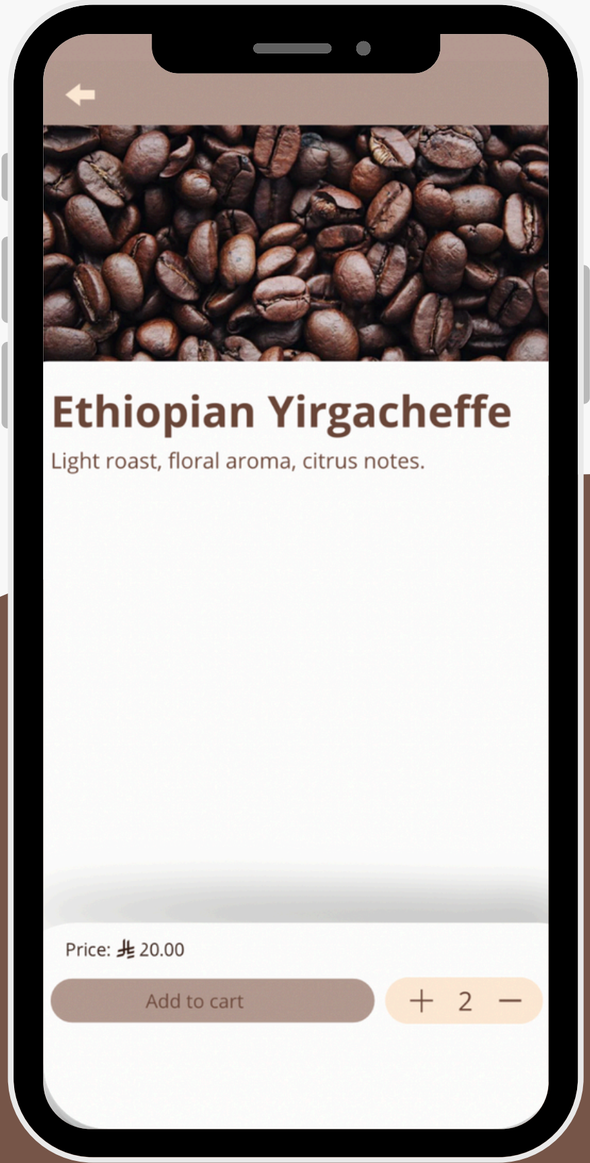

The Prototype Design

Customer Screens

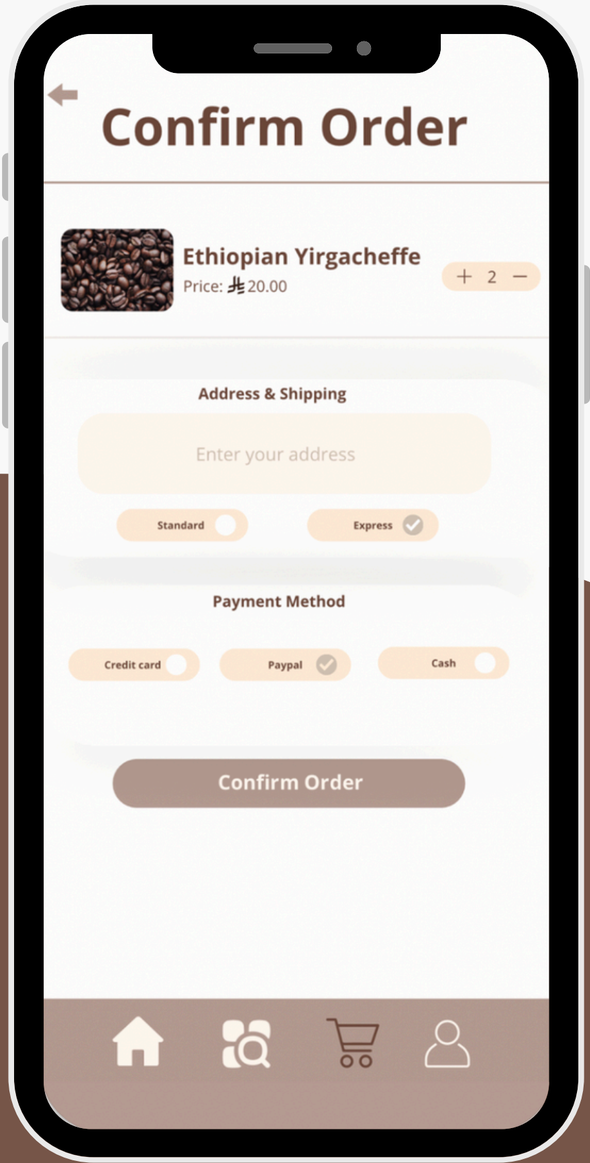

Browsing Screen

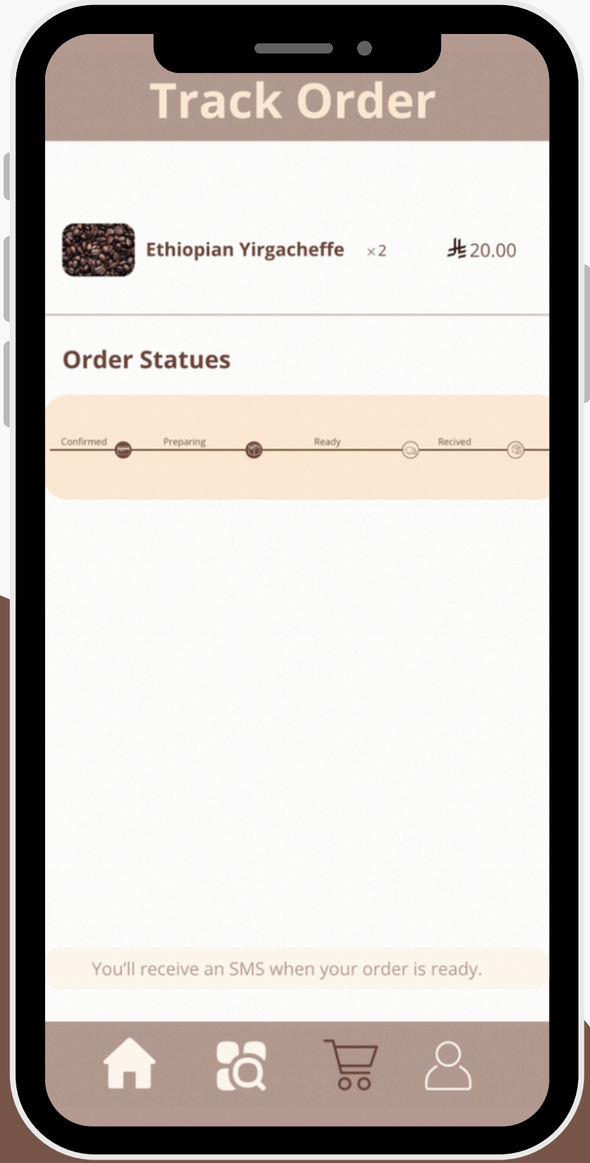

Product Details Screen

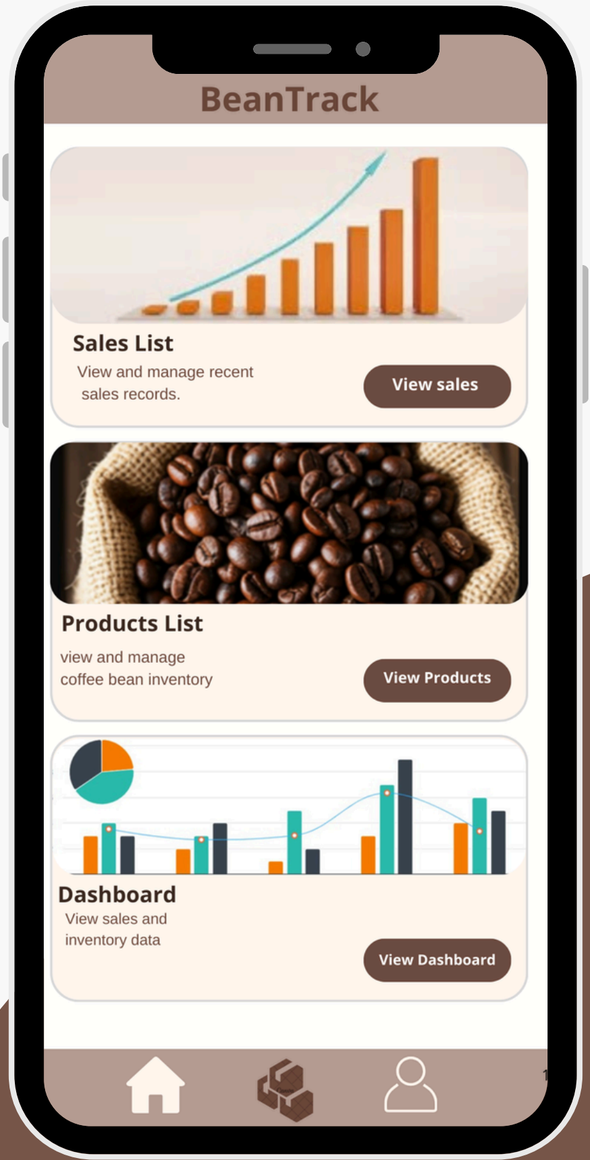

Confirm Order Screen

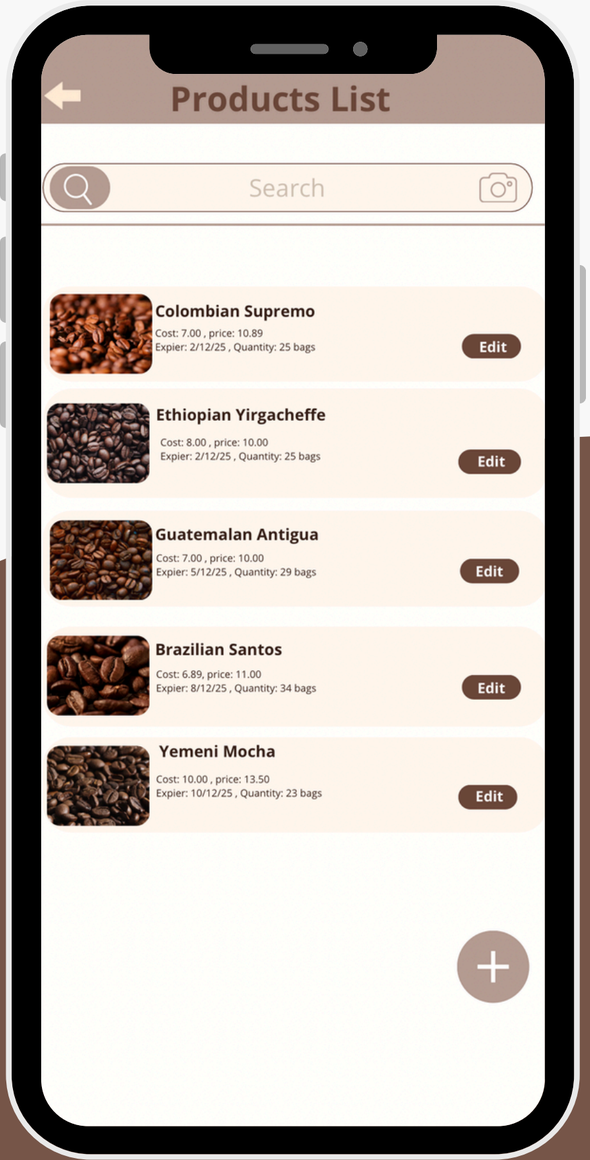

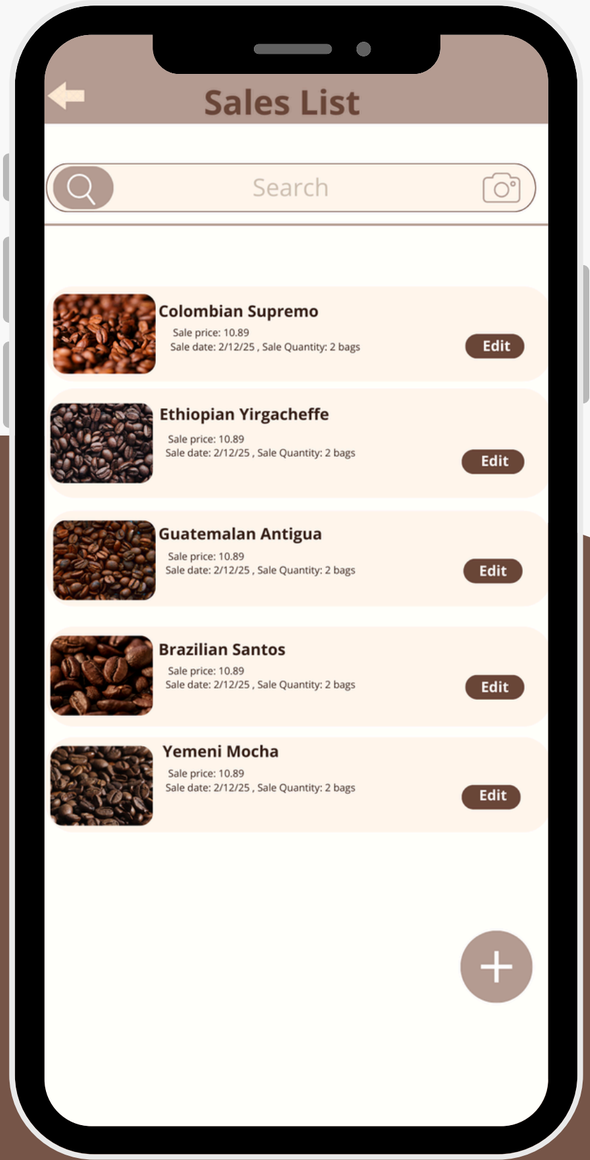

Track Order Screen

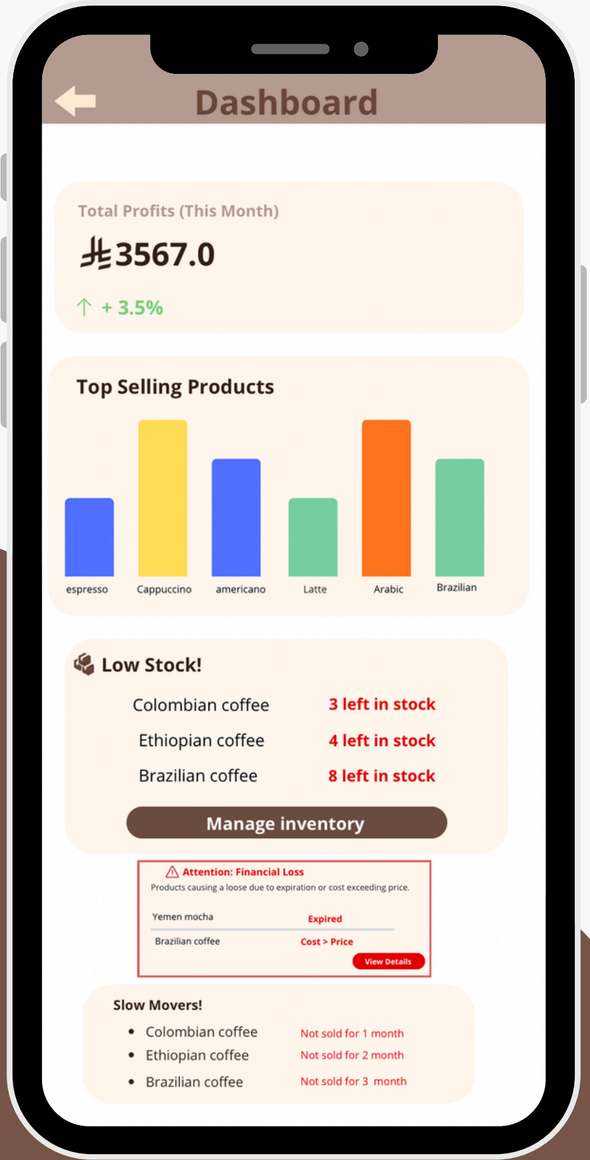

Staff Screens

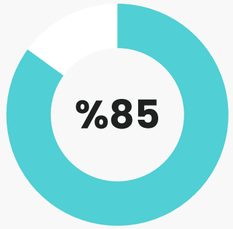

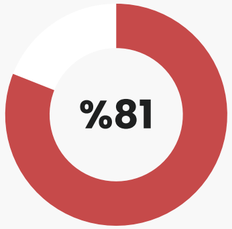

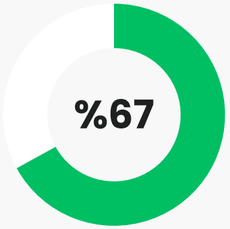

Evaluation & Results

found the interface simple,
intuitive, and easy to navigate.

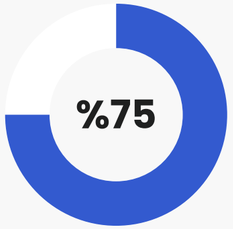

confirmed that the detailed
description sections
helped them differentiate
between beans

supported including a
rating/review system.

believed the dashboard
would
reduce errors and
improve productivity.

found that demand
analytics
(most/least selling
beans, low stock
alerts, expiration
warnings) are highly
beneficial.

Conclusion

In the end our project make the work easier for staff and give customers a clear and small experience. We focused on simple design easy navigation and useful features that help both sides complete their tasks.
